Professional Summary

Have experience in architecting and delivering cloud-native enterprise applications using .NET Core, C#, Web API, Angular, and SQL Server. Seeking a leadership role in enterprise SaaS or fintech, I've:

- Led the design and deployment of 8+ microservices that accelerated cardiology workflows by 30%
- Automated CI/CD pipelines with Docker/OpenShift and Azure DevOps, cutting release cycles in half
- Secured a US patent for an innovative password management system, showcasing my drive for product innovation and security

Strong expertise in microservices architecture, containerization, DevOps automation, and cross-functional team leadership.

Core Competencies

Technical Expertise

- .NET Core / C# / ASP.NET Web API
- Microservices Architecture & RESTful APIs
- SQL Server, Entity Framework & LINQ
- Front-end: Angular 12,
- Containerization & Orchestration: Docker, OpenShift
- CI/CD Pipelines: Azure DevOps
- Version Control: Git, ClearCase

Professional Skills

- Cross-functional Team Leadership & Mentoring
- Agile Project Management & Scrum (CSPO)
- Stakeholder Collaboration & Communication
- Analytical Problem Solving & Root-Cause Analysis

Education & Certifications

- M.Tech – 72% & M.C.A – 72%, Jawaharlal Nehru Technological University, Hyderabad.

- Certified Scrum Product Owner (CSPO).
- Six Sigma Green Belt, in Honeywell.

Patents

- US Patent #9882893: System and Method for Secured Password Management for Industrial Devices

Professional Experience

GE Healthcare, Bangalore — Staff Software Engineer

April 2023 – Present

Project: MUSE (Cardiology Information System)

Technical Environment: .NET Core, C#, ASP.NET Web API, SQL Server, Docker, Azure DevOps

- Designed and implemented in .NET Core Web API to streamline cardiology workflows, cutting process latency by 30%.
- Enforced non-functional requirements: improved response time by 30%, achieved 99.9% uptime.
- Led architecture and security review sessions with product, compliance, and DevSecOps teams to enforce GDPR-level data protections.
- Collaborated with stakeholders to define and prioritize security and privacy enhancements

Micron Technology, Hyderabad — Lead Developer

September 2019 – April 2023

Project: Equipment Tracking Operations (ETO)

Technical Environment: .NET Core, Angular 11, RESTful APIs, Docker, OpenShift, Git.

- Designed and implemented REST APIs and Angular dashboards supporting Equipment transactions.
- Automated CI/CD deployments to Docker on OpenShift; reduced deployment time by 50%
- Configured OpenShift Load Balancer and horizontal pod autoscaling, increasing concurrency capacity by 50%.
- Led a Scrum team of four—facilitated sprint planning, backlog grooming, and retrospectives to maintain 95% on-time delivery.

HCL Technologies (Client: Intuit), Bangalore — Tech Lead

May 2016 – September 2019

Project: QuickBooks Payroll Module

Technical Environment: VC++ (MFC), C# WinForms, SQL Server, ClearCase, NUnit.

- Revamped payroll engine handling payroll for 50,000+ SMBs, reducing calculation errors to <0.1%.
- Orchestrated monthly release cycles and UAT with finance teams, accelerating time-to-market by 20%.
- Introduced automated unit and integration test suites, cutting regression defects by 25%.

Honeywell, Hyderabad — Senior Software Engineer

October 2012 – April 2016

Project: HC900 Controller User Login Module

Technical Environment: VC++ (MFC), ClearCase

- Spearheaded end-to-end redesign of the HC900 authentication module, improving login throughput by 40%.
- Defined a ClearCase branching strategy that reduced merge conflicts by 30% and elevated developer productivity.

NCR Corporation, Hyderabad — Software Developer

February 2012 – October 2012

Project: Point of Sale System

Technical Environment: VC++ (MFC), UML, Rational Rose

- Enhanced POS features in VC++ and MFC, supporting 200+ retail locations, boosting transaction throughput by 15%.
- Authored UML diagrams for new requirements, accelerating development cycles.

IVY Comptech, Hyderabad — Software Developer

October 2010 – December 2011

Project: Party Poker & Party Casino Platforms

Technical Environment: VC++ (MFC), Win32

- Developed core modules in VC++/MFC for real-time gaming applications.
- Collaborated with QA to establish test scenarios and automate test scenarios, reducing critical bugs by 30%.
